Proofbox

From untrusted inputs to evidence-backed action.

Inspect links. Verify paperwork.
Keep the proof.

INSPECT

VERIFY

PRESERVE

Containment-first agents, built on Vultr.

AI + ISOLATED EXECUTION

An answer is not enough.

Risky links and consequential paperwork need more than a convincing summary.

01 / RISK

Can I open it?

Suspicious pages can request credentials, trigger downloads, or reach prohibited destinations.

02 / UNCERTAINTY

Is it correct?

Bills and official letters need explicit checks of numbers, requirements, and dates.

03 / FRAGMENTATION

Where is the proof?

Findings, documents, and replies get scattered when there is no shared evidence trail.

Proofbox connects safe inspection, verification, and a reviewable record.

Three lenses. One case file.

Purpose-built workflows for suspicious links, billing questions, and official correspondence.

LINK LENS

Inspect behavior

Observe a page in an isolated browser. Preserve findings and execution artifacts.

BILL LENS

Recompute charges

Extract the bill, check arithmetic in code, and draft a receipt-backed dispute.

LETTER LENS

Check requirements

Extract dates and requirements. Run layout-based checks on supporting PDFs.

PRIVATE CASE FILE

Evidence + confirmed dates + replies
Export a versioned PDF / ZIP pack.

Inspect. Verify. Explain. Preserve.

Models interpret. Code checks. People confirm consequential actions.

01

Inspect

Run the browser or document task in an isolated worker.

02

Verify

Apply static checks, deterministic calculations, and schemas.

03

Explain

Return findings, caveats, and the receipts behind the result.

04

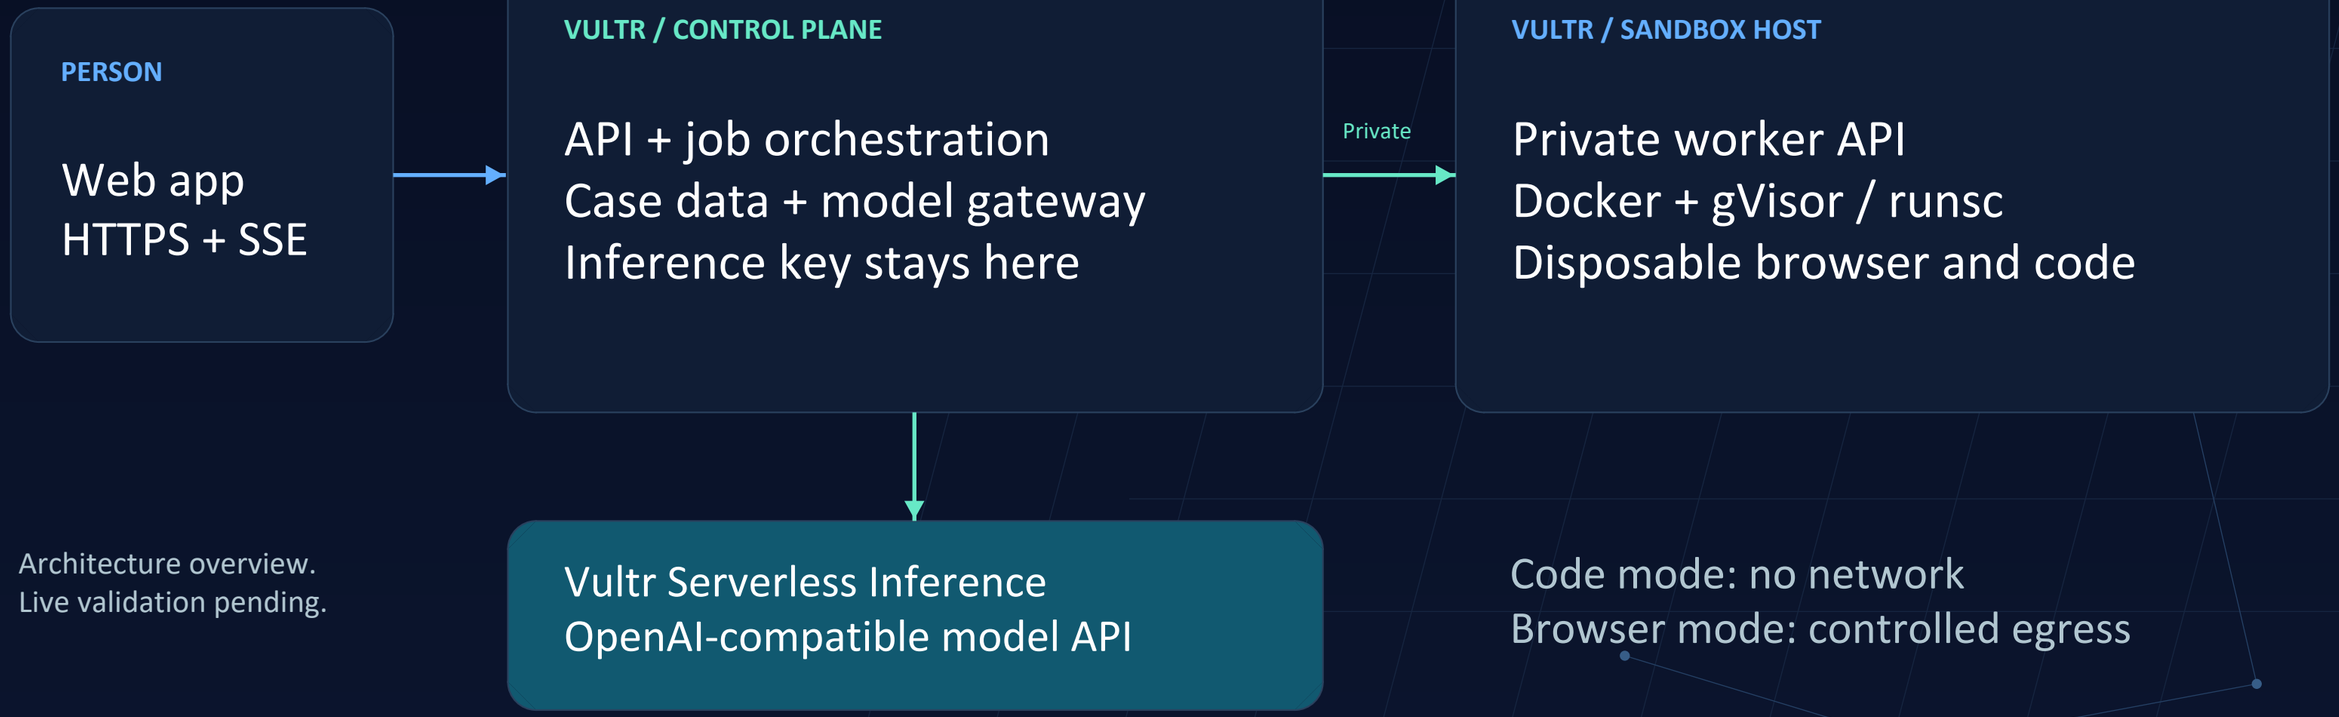

Preserve

Attach to a case, confirm dates, and export the evidence.

The output is a reviewable handoff, not just another chat response.

Separate authority from execution.

A control-plane VM orchestrates work; a separate sandbox-host VM runs untrusted tasks.

Architecture overview.
Live validation pending.

Code mode: no network
Browser mode: controlled egress

Bound the work. Keep the evidence.

Safety comes from system boundaries, not instructions to the model alone.

EXECUTION

Contain

Isolated tasks, resource limits, restricted network access, and temporary execution environments.

CORRECTNESS

Verify

Deterministic calculations and structured checks keep critical findings reviewable.

ACCOUNTABILITY

Preserve

Receipt hashes, stable evidence references, versioned exports, and human confirmation.

Integrity is not authenticity. A reproducible check still needs a verified domain rule.

Less guesswork. More evidence.

For citizens and the teams who help them.

THE OUTCOME

Understand the finding.
Review the receipt.
Act with context.

THE NEXT GATE

Verify live containment and domain rules, then measure quality, review time, and cost per case.

Text PDFs only. Letter checks do not authenticate documents. Production verification remains outstanding.

Open nothing unsafely. Believe nothing unproven.
